REXROTH**Hydromatik  
Brueninghaus Hydraulik**Power Pack A2P Series 5**A2V Variable Displacement Pump with Auxiliary Devices  
Axial Piston – Bent Axis Design

Sizes 250 – 1000

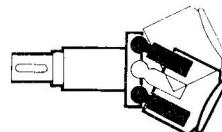

High pressure range up to 400 bar

**RE  
93700  
02.82****Description**

The power pack A2P is based on the variable pump, A2V, Series 5, and together with the auxiliary devices such as valve block and boost pumps mounted and piped on it, forms a complete pump unit for closed circuit operation. Further details are contained in leaflet RE 92450.

Separate leaflets are available for accessories:  
standard accessories (Z14) RE 95034  
noise insulating accessories (Z15) RE 95035

Mounting Brackets, coupling protection, oil-air cooler, oil tank and other accessories on request.

pump, keyed shaft

## Power Pack A2P (Series 5)

## Make-Up Circuit

One circuit of the integral boost pump is used as a make-up circuit to cover leakage in the main circuit. The boost pump draws oil from the tank and supplies it through filter (7) with bypass valve via the appropriate make-up check valve (8) to the low pressure side, which is always connected – by means of the high pressure operated change over valve(4.1) – with the flushing valve (4.2). With the pump in the centre position, the make-up oil is directed to the check valve (9) and via flushing valve (4.2).

See separate leaflet for description of flushing block SDVB.  
(RE 95533)

## Allocation of Valves

A2P size	250	355	500	1000
Flushing block (4)	SDVB 30 SDVB 50	● ●	● ●	● ●
Pressure relief valve (5)	DBDS 6G DBDS 10G	● ●	● ●	● ●
Throttle valve (6)	MG 8 MG 10	● ●	● ●	● ●
Check valve (9)	3 bar	● ●	● ●	● ●

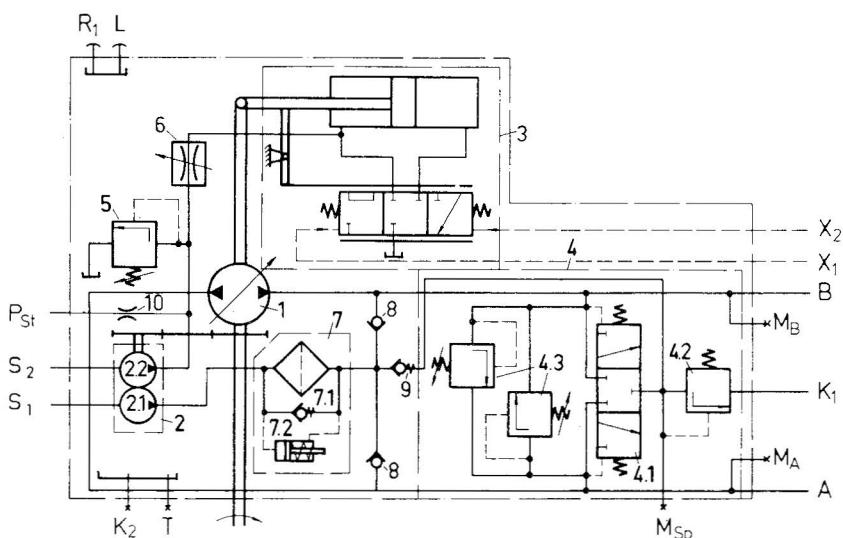

## Control oil supply

When the HD control (3) is fitted, the second auxiliary pump serves as a force intensifier and pilot circuit. Flow and operating pressure range are designed to suit the requirements for short swivel times.

The swivel time of the pump can be controlled by means of a throttle valve (6) fitted in the pipework. The control pressure is set at the required value by means of a built-on force intensifier valve (5).

The pilot oil is taken from the control circuit via the orifice (10). (Pilot oil flow approx. 4 L/min).

## Symbol

## Key

- 1 Variable displacement pump (basic unit A2P)
- 2 Dual circuit boost pump
- 2.1 Boost pump
- 2.2 Control pump
- 3 Hydraulic control HD, pressure related
- 4 Flushing block SDVB
- 4.1 Changeover valve
- 4.2 Flushing valve
- 4.3 Pressure relief valves
- 5 Pressure relief valve, control oil
- 6 Throttle valve
- 7 Boost circuit filter
- 7.1 Bypass valve
- 7.2 Visual clogging indicator
- 8 Make-up check valves
- 9 Check valve (bypass valve for boost circuit)
- 10 Orifice

- A,B service lines
- S<sub>1</sub> boost pump suction line
- S<sub>2</sub> control pump suction line
- P<sub>st</sub> pilot pressure
- X<sub>1</sub>,X<sub>2</sub> pilot lines
- M<sub>A</sub>,M<sub>B</sub> gauge connections
- M<sub>sp</sub> gauge connection, flushing pressure
- R<sub>1</sub> oil filler and air bleed
- K<sub>1</sub> flushing oil outlet (to cooler)
- L(K<sub>2</sub>) Leakage fluid
- T case drain

## Calculation of Size

$$\text{Flow } Q = \frac{V_g \cdot n \cdot \eta_v}{1000} \quad [\text{l/min}]$$

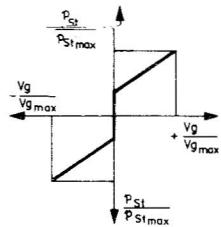

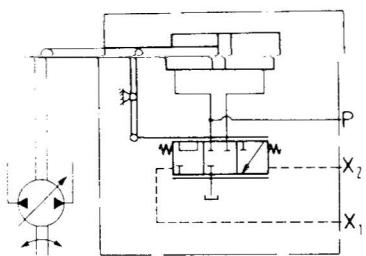

$$\text{Drive Torque } M = \frac{1.59 \cdot V_g \cdot \Delta p}{100 \cdot \eta_{mh}} \quad [\text{Nm}]$$

$$\begin{aligned} \text{Drive Power } P &= \frac{2\pi \cdot M \cdot n}{60000} = \frac{M \cdot n}{9549} = \\ &= \frac{Q \cdot \Delta p}{600 \cdot \eta_t} \quad [\text{kW}] \end{aligned}$$

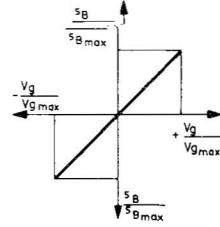

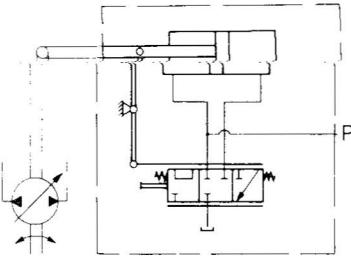

- V<sub>g</sub> = geometric displacement (cm<sup>3</sup>)
- Δp = differential pressure (bar)
- n = speed (rpm)
- η<sub>v</sub> = volumetric efficiency
- η<sub>mh</sub> = mechanical-hydraulic efficiency
- η<sub>t</sub> = overall efficiency
